

Temperature Sensor T09/T10

Description

T09 (single ended) / T10 (double ended) sensor is capsulated by ceramic material with features like small volume, light weight, corrosion resistance and high temperature resistance. It is especially suitable for temperature monitoring of power equipment such as switchgear, dry-type transformer, electric reactor and bus connector in power industry.

Features

- High reliability
- High safety

Applications

- Temperature measurement of switch cabinet contact
- Temperature measurement of dry type transformer
- Temperature measurement of electric reactor

Specification

Item	Unit	Specification
Temperature Range	°C	-40 to 120
Temperature Accuracy	°C	±1
Resolution	°C	0.1
Central Wavelength	nm	1510 to 1590
Cable Jacket	-	Ø1.1mm tube and Ø3mm tube (optional)
Dimension	mm	40x10x5
Pigtail Type	-	SMF-28e or polyimide
Connector Type	-	FC/APC or Customized
